What's New in the Sicurpas Professional?

The password manager allows you to keep track of all your passwords and logins, but also provides the possibility to be able to log into accounts across different sites and websites with just one password, no

matter what the site/website is. And it works for multiple platforms. Key features: - Password generator: you can use the password generator to create a password for any website/service. - View: accesses the sites/websites you use most often and organize the list according to the favorite sites/websites. - Move: you can move a list of favorite sites to the Favorites panel. - Add: you can add

sites/websites to the
Favorites panel with one
click. - Delete: you can
delete sites/websites from
the Favorites panel. - Sync:
you can choose where your
password should be saved. -
Statistics: display details of
the most used and most
frequently used passwords. -
Permissions: decide who
has access to the password
file. - Email notifications:
when a new password is set,
it will be sent to you via

email. - Algorithms: change the way you encrypt/decrypt files. - Encrypt/Decrypt: when you use the encryption/decryption tool, it will automatically encrypt/decrypt your files. - Extra tools: generate new passwords, encryption/decryption tools, file encryption/decryption tools, download/upload tools, etc. - Automatically generate new passwords: no need to retype your

password. - Password generator: you can use the password generator to create a password for any website/service. - View: accesses the sites/websites you use most often and organize the list according to the favorite sites/websites. - Move: you can move a list of favorite sites to the Favorites panel. - Add: you can add sites/websites to the Favorites panel with one
