two types of templates used in AutoCAD: Step templates and PTC templates. PTC templates are used extensively in architecture for creating façade drawings. Workgroup is a group of people with similar interests or objectives. A group can be used to manage project work or share work. A person has the ability to join a group and add, delete, or hide a member. Another term used in AutoCAD is a View option. View options are a set of options that define how the user interacts with the viewport. View options can be selected for different viewports. Command Line options AutoCAD provides a Command Line interpreter.

It is called the command processor. This allows the user to run applications from the command prompt. Commands can be entered at the command prompt and then run with the command processor. Commands are processed using a command pattern.

Each command accepts input and returns a result. Commands may be grouped together using a repeatable command and/or a repeatable sub-command. Command Pattern AutoCAD command pattern is similar to other programming languages in that it contains an if, then, else, endif structure. Commands have the ability to return a value which allows the computer to have more options. This allows the program to have many options to choose from. In AutoCAD commands are used for modifying existing objects and creating new objects. The a1d647c40b
