To use the keygen, click on the 'Generate' button. The generated key will be displayed in the text field. Click 'Open' button and the key will be displayed on the same window. Click 'Save' to save the key. Please note that the keys are not saved into your Autodesk account, so you need to create a new Autocad project and assign the key to it. Add the key to the Project with the Setup function. The key will be automatically added to the current project with the label "Project key" and saved into the file "Private.Settings". After the project setup, the key must be activated using the 'Setup Project' function. Generating a reference The reference key for the project will be stored in the file Private.Settings. The reference key is automatically created by Autodesk when a project is created for the first time. It can be activated using the 'Reference Key' function. Validation The validation is the validation and evaluation of the valid information in the project file. The validation process will automatically check the number of the required elements in the project. If the process is finished, the validation status is indicated with the message "Validation is complete." Information Notes Note The project template is autogenerated and cannot be modified manually. This template can be used with the Autocad 2017, 2016, 2014, 2013 and 2010 versions. Keygen tools Why Register? What is a Keygen? A keygen is a software that generates keys for various programs.
