## What's new:

for PC **Virtual Villagers : The Lost Children** is a 1999 turn-based role-playing adventure game for Microsoft Windows. It was written and published in North America by Ubisoft. It is the direct continuation of the **Virtual Villagers** series, and was the fourth in the series to be released. Set in the present, the player progresses through eleven rounds, one per level. When progressing from one level to the next, the player controls one of three characters (Villager, Miller or Scientist), each with his or her own set of attributes and items. The campaign is divided into three "seasons", each of which are optional, and in the case of season three is based on real-world time. Each of the missions on the other hand is independent of the rest, and each mission needs to be completed individually. The game features a number of changes from previous games, such as a dialog-based leveling system. **Virtual Villagers : The Lost Children** was developed on a budget by a small team of programmers. Though the game received positive reviews, its sales were disappointing. After attracting large crowds to the venue at E3, a decision was made in late 2000 to release an exclusive demo for online fans of the series. The demo release immediately sold several million copies. **Gameplay Virtual Villagers : The Lost Children** uses a turn-based system when interacting with non-player characters (NPC). The turning system is similar to the fourth game in the series, **Virtual Villagers 3D**. It has also been influenced by the **Luxor** series. The game can be played in one of two modes. The first mode is a tutorial, which teaches the player how to play the game and how to interact with the world of the game. The second mode, "Survival", is where the entire story is played. In the game, a player takes the role of a schoolgirl named Mineka who is exploring the town for the tenth time. While travelling around the town, she will eventually meet other characters that the player interacts with. With each NPC, there are certain skills that can be learned. These skills are represented by clicking on the character's portrait, although the actual list of skills is different from one NPC to another. Each NPC has a certain "talk level", which is lowered by reaching certain talk levels. When an NPC is about to talk with the player, the player will be prompted to make decisions. The degree of the character's mood, or the choice the player makes,
