### Hp Msa Device Discovery Tool Download

in the previous section i have listed the hp system that is supported by snmp method. the webes method is supported only for hp proliant servers. for hp blade servers snmp method is not supported. the wmi method is supported only for hp storage devices. there are two type of hp devices that are supported by wmi. one is the hp storage devices and other is hp non-hp devices (non hp devices being the one that are not supported by snmp method). wmi method supports hp non-hp devices as well. hp storage management pack can be downloaded from hp website.

---

the mp is a part of larger hp storage management package. for hp blade server the hp storage management pack is a part of hp storage management 8.0. for hp proliant servers the hp storage management pack is a part of hp storage management 7.1. there is no difference between the two versions of the mp. in my previous posts i have covered hp storage management 8.0 and hp storage management 7. in order to install the mp, you need to first download and install the necessary patch that needs to be installed for the mp. you can refer to the geniso patch. the mp is installed using the same installation method as used for hp storage management 8.0 and hp storage management 7.1. there is no difference in the installation method. once the mp is installed, you need to configure the snmp for hp storage devices. the copyright statements and licenses applicable to the open source software components distributed in vsphere 7.0 are available at. you need to log in to your my vmware account. then, from thedownloadsmenu, selectvsphere. on theopen sourcetab, you can also download the source files for any gpl, lgpl, or other similar licenses that require the source code or modifications to source code to be made available for the most recent available release of vsphere. 5ec8ef588b
