These features are available to all existing customers: Filters are one of the more popular features in software such as Photoshop. They have been improved, but a new feature is just around the corner, which will be really exciting. The NIK filter is a new editing filter that works by understanding context and intelligence. If you thought that the filter you are using isn't giving the best results, therefore you need to try something different, you may well be right. The new feature is now open to customers and you can read more about it here.
