You might have heard about the Adobe Photoshop special effects, or Photoshop masks, but you may still be wondering just what are these great effects and what makes them so amazing. The purpose of using a special effect is to enhance and transform the image. So, the effect you use should suit the type of product you are creating or the message you want to convey. Read on to find out the coolest Photoshop special effects and how they are used. When it comes to image manipulations, one of the most important elements of the image is, of course, the lighting. Photography is a lot about the shadows; not only is it about the dark and light areas, it's also about the highlights. Using the Color Exhibit tool, and to a lesser extent the Clone Stamp, can affect what the eye sees in an image depending on how you want the highlights and shadows to be manipulated. Many images will have some of the highlights or shadows clipped or even missing entirely depending on the image. Can you restore and manipulate those areas? Using a shadow/highlight control layer it's easy to bring back those lost areas. Before we get into creating a new Shadow/Highlight control layer (which can be set to any visible color you want) we're going to need a copy of the original image. Select all of the pixels in the image via either the Edit menu and select "Copy" or via a Copy/Paste with the Ctrl+C buttons. Now paste the image into a new layer and you've just created a new Shadow/Highlight control layer.
